ZONAR 2010™

Ensure
accurate, verified inspection reporting

Prevent
pencil-whipping & rushed inspections

Comply
with DOT, OSHA, MSHA & PTASP

Automate
service & repair scheduling

Eliminate mistakes and paperwork with verified inspections.

Every required inspection needs to be performed thoroughly and properly. But not everyone in the field carries a mobile device to use our **Zonar EVIR® or EVIR Mobile**. Our Zonar 2010 inspection tool is a rugged device for performing electronically verified inspections in the field, without needing a smartphone or tablet.

- Comply with all OSHA, MSHA and PTASP inspection regulations.
- Remotely verify that every inspection is performed properly.
- Perform inspections in harsh conditions and rugged environments.
- Integrate into your maintenance software platform.

Tag once. Inspect regularly. Know always.

Tag it. Fix Zonar tags to each inspection zone on the vehicle. Each tag corresponds to that asset, its specific vehicle information, specific zone information and unique driver number.

Inspect. Drivers and operators must physically visit each zone, scan the tag with the 2010 reader, and enter the results with easy-push button responses. Inspections are time-stamped so you can be alerted if a specific zone or overall inspection is rushed or incomplete.

Transmit. Inspection results upload automatically. If there's a defect, maintenance gets it fast. This way, repairs happen sooner and downtime stays low.

Key features

- DOT, OSHA, MSHA & PTASP compliant
- Smartphone or tablet not required
- Zonar 2010 inspection tool
- Zonar inspection tags
- Built for harsh conditions
- Electronic record keeping
- Option to automatically delete dated records
- Customizable drop-down lists, text & number fields
- Integrates into maintenance software platforms
- Eliminates work order entry
- Eases the audit process
