

ZONAR Bus Suite™

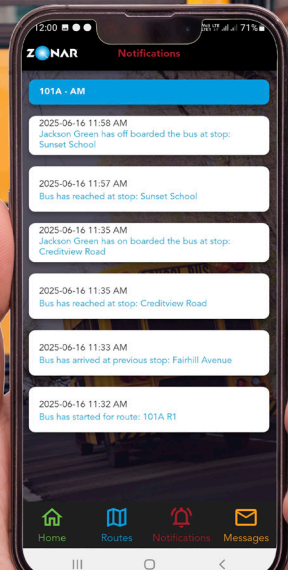

School bus tracking app

Protect
rider data

Reduce calls
to dispatch

Put parents at
ease

Be open &
transparent

Empower, inform and reassure.

Build trust and protect students.

Strengthen communication with families and reduce call volumes. Provide a mobile app for securely tracking their child's school bus in real time.

The more easily they stay in the loop about their child's bus location and arrival times, the more secure they feel about trusting your service. And the less likely to call for updates.

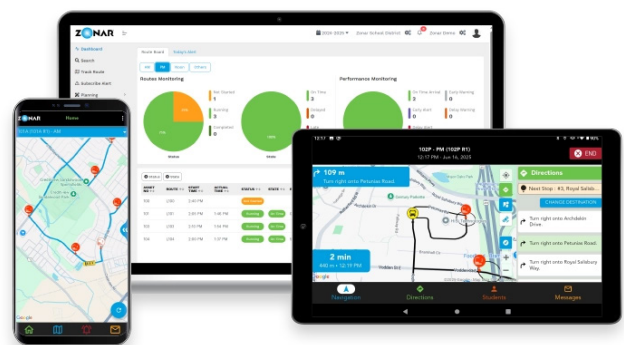

For parents and guardians

- Secure, real-time bus route tracking
- Push notifications for departure, bus arrival, and student boarding and exiting
- Greater peace of mind

For schools and districts

- Stronger student safety and accountability
- Reduced parent call volumes
- Greater trust and transparency

Protect against prying eyes.

Student safety and data security stay priority. No one can intentionally or accidentally start tracking any student's bus.

Guardians request access to use the bus tracking app. Or districts set up the account on their back-end portal. Once the account is created, guardians create and setup their password.

Districts are responsible for assigning the student(s) and routes to the appropriate, authorized guardian.

Important: Parents and guardians can track the bus only when it's on its run and their child is on board. Districts can lock down the parents view to only see the bus associated with their stop.

Keep them in the loop, every stop.

In the morning

Parents and guardians receive a notification when the run starts.

They track the bus in real-time, including live location and stops, on a map view. And receive a notification when the bus arrives at the school.

In the afternoon

They receive a notification when the bus leaves the school. And a notification when the bus is heading to their stop next. And another when the bus arrives.

When the run ends, they're no longer able to see the bus's location and activities.

Digitize their peace of mind.

Strengthen student safety and provide more peace of mind. Integrate Zonar Z Pass® student ridership tracking to digitally capture basic ride data.

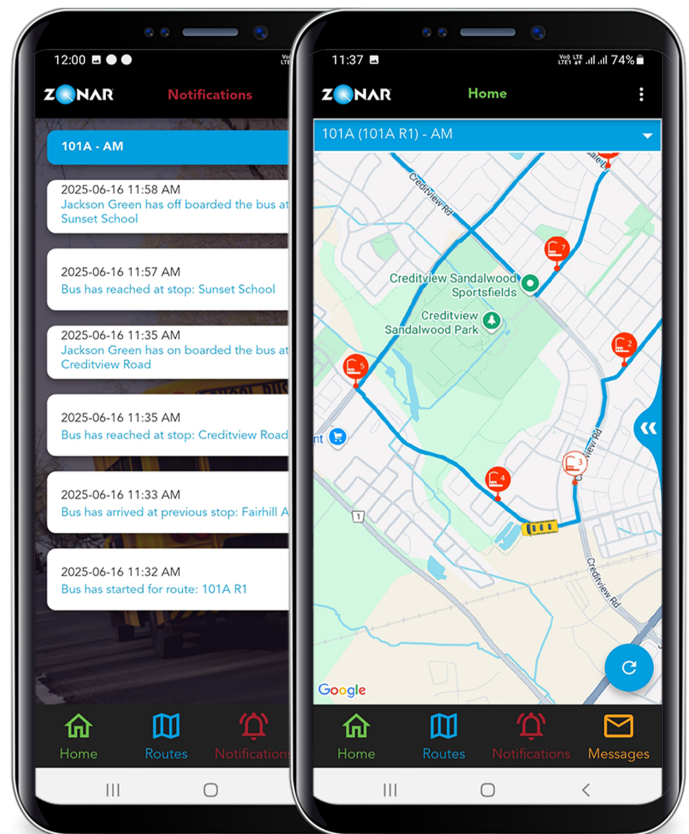

- Students scan a passive RFID card when they board and exit the bus.
- Z Pass captures time, location and bus number of the scan associated with that card.
- Families know when and where their child got on and off the bus.

Be open when plans change.

The faster and more clearly you communicate when plans change, the more parents and guardians will appreciate—and trust—your operation.

To keep families in the loop, dispatchers send real-time updates through the Bus Suite Parent app.

- To the parent or guardian of a specific student
- Or to a group of parents and guardians who have a student associated with that route

These communications are easy for parents and guardians to find in the Messages tab in the Bus Suite Parent app.

Plus, they also receive a push notification as well.

Key features

- Live bus tracking
- Boarding & exit notifications
- Delay & route change alerts
- Secure access
- Available on iOS & Android
