

Protect

everyone on the road, even drivers

Access

video online, on demand instantly

Avoid

legal expenses & false claims

Build

a more effective safety program

See what happened—inside the cab and out.

When in doubt, roll the HD footage.

Sometimes drivers get distracted, make mistakes, or misremember events. Sometimes scammers stage a crash and blame your driver to the tune of millions.

Whatever the case, Zonar Coach™ helps you see what really happened and protect your fleet with solid video evidence. When something goes wrong, the proof is in the footage.

- Detect and capture risk on the road with a video-based safety solution.
- Coach safer performance with enhanced, in-cab driver training.
- Mitigate false claims and protect against nuclear verdicts.
- Lower insurance rates with proven driver coaching and incident recording video.

Strengthen safety, lower risk.

Zonar Coach™ is a video-based safety solution that installs in minutes and captures what hearsay can't.

Its HD camera, Zonar Dashcam™, uses artificial intelligence (AI) and a g-force accelerometer to automatically detect and capture unsafe driving behaviors. Within minutes of an incident, the footage uploads to the cloud and becomes instantly available for review in the Zonar Ignition™ platform.

- See a 142° view of the road and inside the cab.
- Watch clear infrared footage, day or night.
- Alert staff instantly with the built-in panic button for emergencies.
- Download on-demand video to see the full story before, during, and after an event.

Assess events with flexible footage.

When the AI-powered Zonar Coach™ dashcam detects an event, it automatically uploads footage to the Zonar Ignition™ platform almost instantly.

- Access footage on demand, online.
- View footage based on severity, asset, driver or trip.
- Review incidents before the trip ends.

Need more detail? Request on-demand footage for an accident investigation or insurance claim.

- Select dual-facing, forward-facing only or driver-facing only view.
- Select video duration and quality.
- Watch a trip timelapse for an at-a-glance view of the entire route.

Alert drivers to prevent incidents.

Reviewing captured footage is one way to protect your fleet. Enabling drivers to self-correct in the moment is another.

Zonar DashCam™ detects a range of unsafe driving behaviors inside and outside the vehicle. When it does, Zonar Coach™ issues an audible, customizable alert so drivers can make instant adjustments on the road.

Streamline coaching—anytime, anywhere.

Coach drivers on the road or in the office with a standardized, three-part workflow. View scorecards and safety rankings based on the number of events per 100 miles.

Select the driver, then start the three-part process:

Part 1: Review the driver's previous coaching session, notes and event trends.

Part 2: Choose from videos recommended by event severity, or select specific ones manually. Mark each as coached once reviewed.

Part 3: Add notes after completing all videos. Access every completed coaching session anytime through the Zonar Ignition™ platform.

Exonerate safe drivers.

Clear your drivers during trip reviews or coaching sessions. If a video shows no fault, remove it from their record so it doesn't impact their overall score.

Key features

- Custom email alerts
- AI-powered, dual-facing dashcam
- Real-time, in-vehicle preventative alerts
- High-definition video footage
- Panic button
- RideView Companion app
- Timelapse of each trip
- Dashboard for fleetwide visibility
- Infrared camera for night driving
- Driver scorecards
- Streamlined incident reviews
- On-demand recording
- Real-time performance KPIs
- Operates in U.S. & Canada
