

Deliver powerful remote data across your rental and lease fleet with Zonar Remote Monitoring Service™. Locate and recover runaway or default assets. Gain visibility into vehicle diagnostics and health to increase customer uptime. And automate odometer reporting for precise billing and depreciation monitoring.

# Zonar Remote Monitoring Service™

Engineered specifically for commercial vehicle dealers, lessors and financiers.

Inventory management	Asset management
<b>Protect your investments</b>	
Monitor a single asset or an entire fleet's location on a map. Geofence your yard and job sites and track vehicle movement. Receive alerts when assets move unexpectedly—such as suspected theft—so you can make decisions quickly.	See detailed diagnostics and fault codes—not just odometer readings—for assets that need attention. Locate and maintain vehicles proactively to decrease unplanned downtime and save time and money on critical downstream repairs and potential vehicle replacements.
<b>Empower your business</b>	
Quickly locate and pinpoint a vehicle within 15 feet of GPS location. Know the health and status of an asset—from fault codes to battery level—before you show it to a customer.	Receive notifications when an asset arrives at a final customer location. Locate assets, including recovery vehicles and those suspected of tampering.
<b>Find new revenue opportunities</b>	
Eliminate countless operational man-hours spent collecting inventory data. Deliver the data you need—when you need it—directly to your inbox, freeing up valuable time to drive new business revenue.	Catch immediate repairs early and help direct customers to your nearest service center location. Run odometer reports for more precise billing and depreciation monitoring.

## General features

- Scheduled reporting
- Custom reporting
- Text, email notifications
- API access and calls

## Diagnostics

- Automatic VIN from ECU faults

## Speed and location

- Geofencing
- Location and address
- Speed and posted speed
