

How Zonar MyView™ keeps student data safe.

And why you can trust that their information stays secure.

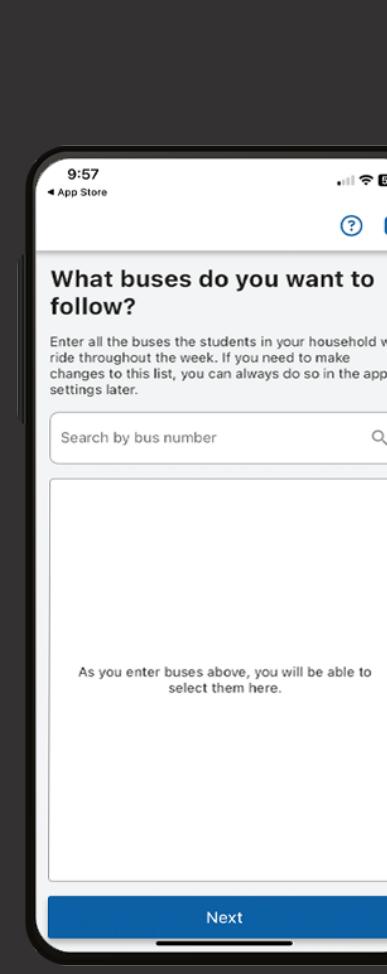

MyView enables parents, guardians and caregivers to track their child's bus, changes and estimated times of arrival on their mobile device—without calling the school.

MyView does *not* access student records, capture personal information, or make their data and location information vulnerable.

3-step security

Using the MyView parent app requires three pieces of information, each of which the district issues.

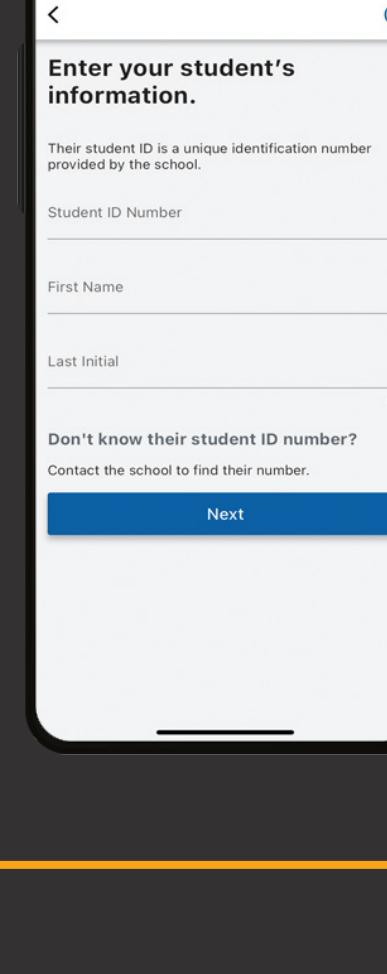

- District access code
- School bus or route number
- Student's external ID number

No access code? No access.

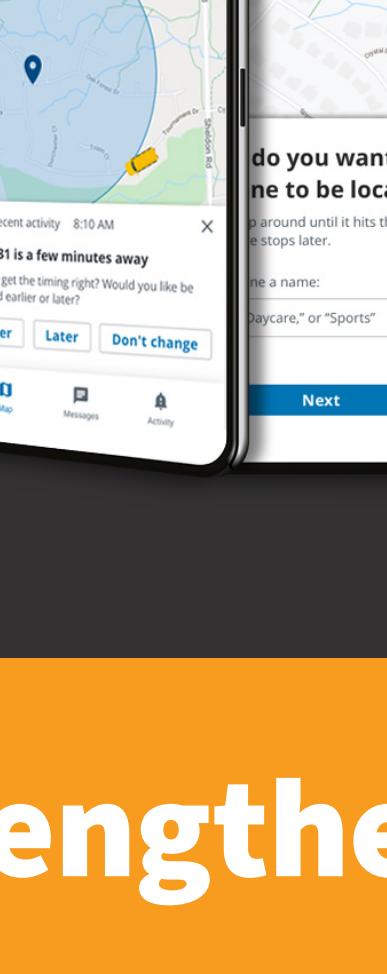

Can't guess a password. Users must enter the district-issued access code on the first MyView app screen.

MyView also supports FaceID and Thumbprint password protection to ensure the right user is using the app.

No bus or route number? No luck.

Can't pick from a list. Users must type the school bus or route number to select which vehicle(s) their child takes.

No student ID? No location.

Can't peek at another family's school bus. Users must enter their own student's district-issued, external ID number to find the bus and stop.

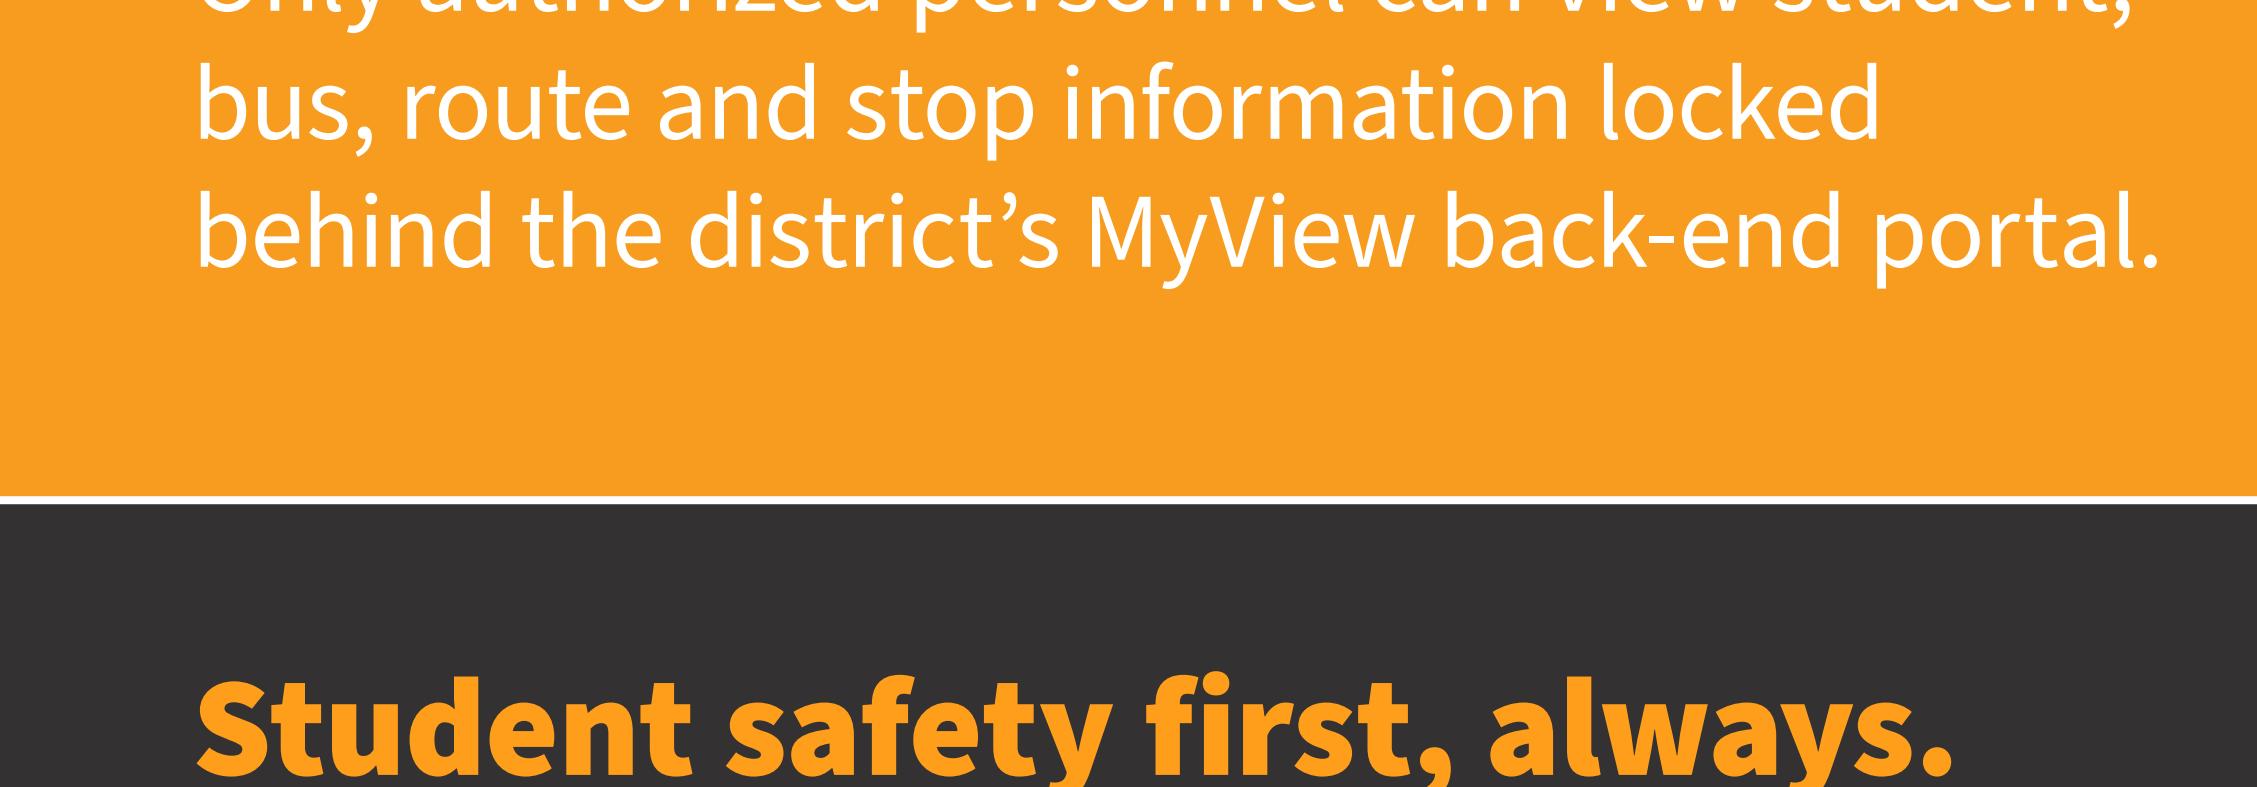

No strangers allowed.

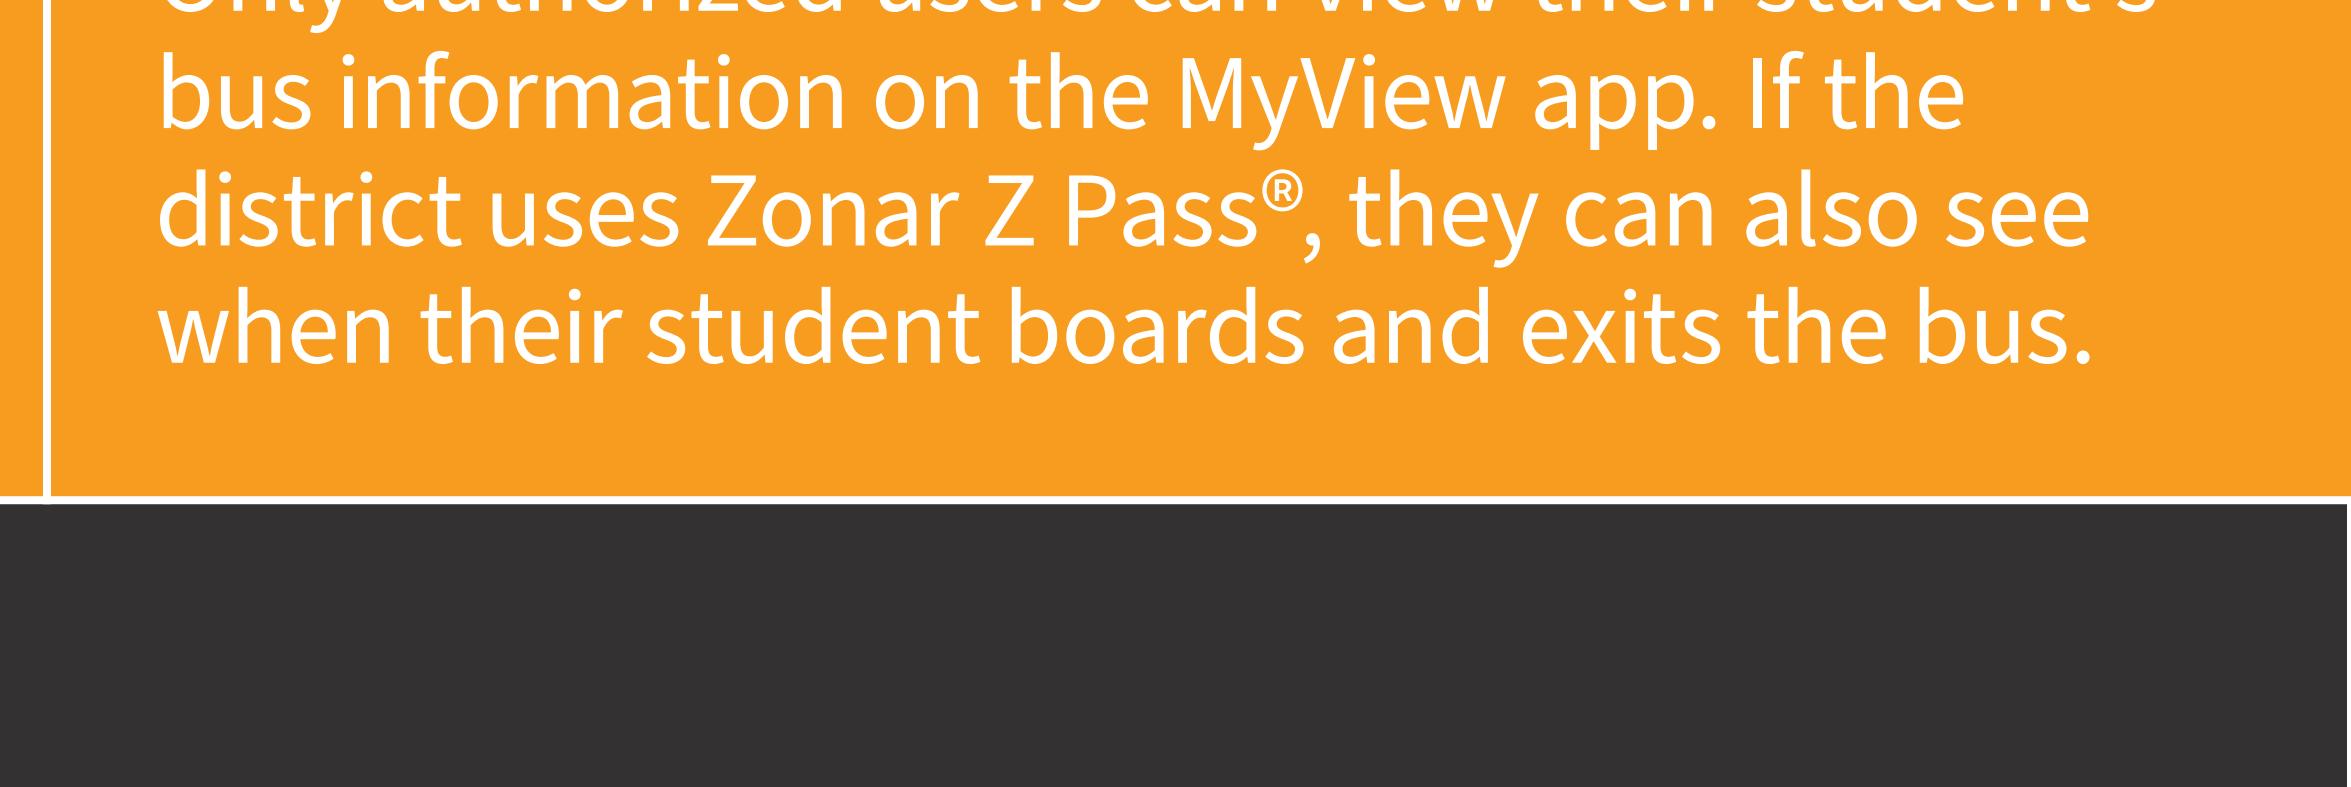

Can't skip a step. Users must enter all three pieces of district-issued information, plus the student's name, to use the MyView parent app.

Strengthen student safety.

School districts should lock all bus, route and access code information behind a district parent portal, away from public eyes. And change the access code before every school year.

Only authorized personnel can view student, bus, route and stop information locked behind the district's MyView back-end portal.

Only authorized users can view their student's bus information on the MyView app. If the district uses Zonar Z Pass®, they can also see when their student boards and exits the bus.

Student safety first, always.

We understand how important student safety is, especially to districts and parents. If you have questions or concerns, we'd love to hear from you. Contact us at: www.zonarsystems.com/contact
