

How Zonar Z Pass® keeps student ridership data safe.

And why you can trust that information stays secure.

Z Pass confirms basic data associated with the Z Pass RFID card. Only authorized district personnel know who got on and who got off each bus and where at any time.

Z Pass does *not* track students wherever they go, violate their privacy, access their records, or make their personal data and information vulnerable.

Strictly need-to-know only

Scans confirm only essential info associated with a specific, district-issued RFID card.

- Student's external ID number
- Student's first and last name
Districts choose to capture student name—or not.
- School bus number
- Date, time and location of the scan

Student

Scans school-issued RFID card to the Z Pass device while boarding and exiting the bus.

Z Pass device

Transmits student ID number and name (if the district chooses) directly to the Zonar V4® telematics control unit.

Zonar V4

Transmits student ID number, bus number and vehicle GPS data directly to Zonar Ground Traffic Control®.

Zonar Ground Traffic Control

Displays data transmitted by the V4 in a ridership report for only authorized personnel to access.

Uses only Zonar technology

Each scan captures only essential info associated with that district-issued RFID card.

- District-issued Z Pass RFID card
- Z Pass scanning device
- Zonar V4 TCU
- Zonar Ground Traffic Control
- Zonar MyView™

Student safety first, always.

We understand how important student safety is, especially to districts and parents. If you have questions or concerns, we'd love to hear from you. Contact us at: www.zonarsystems.com/contact
