# Every student. Every mile.

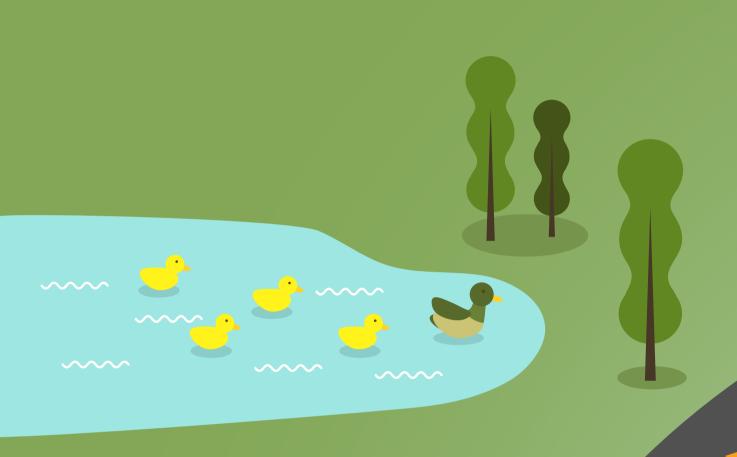

## Every year, school buses transport...

23.5 million students

## More than 4 billion miles

## **Keeping drivers on time**

On their Zonar tablet, drivers view their daily schedule, and clock-in and -out of each route with Zonar Access. Districts lower costs, and keep drivers and buses on time.

### **Checking for students**

No school wants a child left on the school bus. After making sure the bus is clear, the driver will disengage the Child Check-Mate System® at the back to physically verify the bus has been checked and that no students are still on board.

## **Meet Ben**

Like millions of students, Ben relies on the bus to get to and from school every day. See how Zonar technology keeps Ben safe along the way.

**Keeping the bus safe** 

In the yard, the driver inspects the bus to make sure it's in good working condition. Using EVIR®, the driver physically scans each tag affixed to the bus at designated inspection zones. This inspection data is automatically and digitally captured so results can be accessed and reviewed as soon as possible.

## At Ben's afternoon stop

Ben scans his RFID card to the Z Pass device before exiting to capture when and where he disembarks. The driver uses Verify to make sure Ben's getting off at the right stop, so he doesn't get lost. MyView sends Ben's parents a notification that he got off the school bus and where.

### **While Ben waits**

The transportation office uses the Zonar V4<sup>™</sup> GPS to track Ben's school bus along its route. His parents track the bus using their MyView parent app to see when it's estimated to arrive.

## After school, same process

In a sea of school buses, Ben finds the right one. He scans his RFID card to the Z Pass device. The driver uses Verify to make sure Ben is an authorized rider. MyView sends Ben's parents a notification that he's boarded as scheduled, and his parents use MyView to track Ben's bus all the way to his after-school stop.

## **When Ben boards**

He scans his RFID student card to the Z Pass<sup>™</sup> device, which records when and where he boarded. The driver uses the Zonar Verify <sup>™</sup> app on his tablet to check Ben against the approved roster. If Ben's on the list, he gets to ride. If not, the driver is alerted instantly. The process takes seconds, start to finish.

## On the way to school

MyView sends Ben's parents a notification to let them know he boarded the school bus. They use their MyView parent app to track the bus and see when it arrives at the school—with Ben still safely on board.
