

Every solution you'll need, today and tomorrow.

Simplify and streamline your school transportation management operations with unified, all-in-one solutions from two industry leaders: **Transfinder** and **Zonar®**. Integrate Transfinder's full-featured, web-based routing solution with Zonar's modern smart fleet management solutions to easily manage bus routes, students and drivers.

Use Transfinder's solutions in concert with Zonar's real-time GPS vehicle tracking to easily build routes, as well as make more informed routing, scheduling and planning decisions. Plus, prevent vehicle downtime by streamlining maintenance workflows with integrated verified inspection reporting.

While you're at it, modernize your fleet with mobile driver tools and student safety technologies.

- Verify that every required inspection and child check is performed properly.
- Identify major defects, automate work orders, and streamline maintenance and repair scheduling.
- Capture real-time and historical GPS tracking data simultaneously for easy, on-the-fly routing adjustments.
- Outfit buses with contactless [ridership visibility technology](#) to safeguard students and drivers.
- Optimize routes for greater efficiencies, especially during driver shortages.
- Build routes, take attendance and navigate—all from your mobile device.
- Equip drivers with rugged, secure and fully managed tablets, with access to a library of trusted third-party apps.

See deeper inside your fleet operations.

The Zonar V4™ telematics control unit can be configured to include a rapid response, intelligent algorithm. When installed on the bus, the V4 captures and transmits high-fidelity GPS data to provide more precise Transfinder routing and mapping. And with Transfinder's [Routefinder PLUS](#) web-based routing solution, you can easily manage bus routes, students and drivers.

Create and analyze hypothetical scenarios to continually improve service and lower operating costs. Track driver habits and driving variances such as planned vs. actual stops, speeds, idling and more. Access Zonar Ground Traffic Control® to review and analyze your fleet's detailed, real-time telematics data for critical insights that drive your fleet's every function.

Verify inspections and reduce downtime.

Use Zonar's patented Electronic Verified Inspection Reporting (EVIR®) system to verify that every required inspection and child check is performed properly. And, to ensure that each vehicle is in safe operating condition. Takes about half the time of paper-based inspection systems.

Integrate EVIR repair data into Servicefinder, Transfinder's fleet management system, to identify major defects, automatically generate work orders and streamline maintenance workflows. Servicefinder also enables you to schedule technicians and repairs, manage parts inventory with precision, control overtime and supply costs, and more.

Build routes, take attendance and protect students.

Transfinder's Wayfinder serves as an all-in-one vehicle app and is a [certified third-party app](#) on Zonar tablets. Using Wayfinder, accurately capture the bus path, stop locations, driving directions and times while on route. Plus, drivers can navigate turn by turn, and take student rider attendance—all from their mobile device.

When used in conjunction with the [Zonar Z Pass™](#) student ridership visibility solution, drivers can use the attendance feature to view student photo and information to ensure each student boards the correct school bus.
